## Countertops and Sinks

## **Residential—Decorative Commercial**

**STAINLESS STEEL    COPPER    BRONZE    ZINC**

### **COUNTERTOPS, SINKS AND BARS**

**Our company strives to provide a professional and pleasant experience to all our customers. Customer service and satisfaction come first.**

**Our countertops and sinks are custom designed and manufactured for your home or business. This level of quality far exceeds commercial manufactured or mass produced products.**

**We work with you and your designer to create a unique look tailored to your lifestyle. We have over 30 years experience in the metal industry with expertise in choosing the right material for your job. Most importantly, we measure and template your job so it is done right!**

### **Isn't time to leave the Stone Age behind?**

**All of our metal options go to the head of the countertop class. Unlike stone (such as the ubiquitous granite) metal is nonporous — read antibacterial and stain-resistant. They are green, all are produced from recycled materials and are completely recyclable; metal countertops don't require sealing or more than soap and water to clean. Metal does scratch, however, so keep the cutting board handy. And when you get the inevitable etches, enjoy the unique character that will develop.**

**This catalog contains information about our custom fabricated counter tops, sinks and bars. We have other catalogs for each of our product lines.**

**Look over our catalog and please call or email us with any questions.**

# Stainless Steel

Stainless steel is chic, contemporary, and noted for its association with professional kitchens. It is stain resistant, and the only surface that can be safely bleached and sanitized. It is the only material approved by NSF for use in food preparation.

We offer numerous finish options on all of our countertops and sinks. Countertops can be produced seamlessly to any size limited only by transportation. An integral stainless steel sink will create an integrated seamless look, while backsplashes with corrugated patterns create dimension. Our under-mount sinks add elegance, form and function to any kitchen or bath. Bars and countertops are fabricated with a wood substrate that becomes more sound resistant, or with stainless steel cross bracing for the cook that demands commercial performance. The thickness of your countertop can be at your option and you can choose from several edge options.

# Copper

Copper is a metal with a long history of human use, the metal that brought humanity out of the Stone Age and into the Bronze Age. It's warm, rich color can look amazing if used in kitchens, baths or decorative commercial applications. Our countertops are constructed using large pieces of copper sheeting. Our countertops are made with no seams to detract from it's the beauty. The color of polished copper is golden brown or red orange, but oxidization quickly affects the metal and it darkens and gains more of greenish hue. Many people prefer this rustic, aged look in their kitchen.

Because of copper's soft and malleable nature it is perfect for creating unusual custom designs, as it can be bent into shapes other countertop materials cannot. You can therefore let your imagination run wild and create interesting countertop edges and outlines with copper

Copper is truly anti-bacterial, killing microbes that come into contact with it. The surface becomes your own unique 'living finish'

We offer custom copper farm sinks, under-mount and seamless options.

**You can choose from a virtually endless variety of patinas for your countertop**

## Bronze Counter Tops

Previously rarely used as a countertop material is the copper alloy, bronze (copper and tin) the mix of metals makes both of them harder than copper and both start out with more golden hues than its salmon-colored parent. These characteristics have made bronze the rising star in counter tops, sinks and even appliances.

Bronze finishes include the dark popular oil-rubbed and antique patinas from light gold to dark brown, almost black.

**Make a bold statement in your kitchen, bath, restaurant bar or reception display with bronze!**

# Zinc Countertops and Sinks

## Zinc: The Miracle Mineral

Take a zinc lozenge for a cold, slather zinc oxide on your baby's rash, and — what the heck — put it on your kitchen countertops. People have for centuries — if you've eaten in an oyster bar, for example, you've seen a zinc countertop. Skip the polish and zinc's silver shine will develop a blue-grey patina. A soft metal, the edges can be decoratively shaped, echoing dental or crown molding or your own design. Interest in zinc is leading more homeowners and business owners to include it in their plans.

## **Other Products**

**Range Hoods and Liners**

**Backsplashes and Wall Panels**
